

PERSONAL PORTFOLIO WEBSITE

PROJECT DOCUMENTATION

Student Details

Name: Anushka Singh

SAP ID: 590023224

Course: B.Tech

Batch: Batch 5

Date: 10 September 2026

1. Project Objective

The objective of this project was to design, develop and host a responsive personal portfolio website using HTML, CSS and JavaScript. The website presents my introduction, skills, projects and contact information in a clean and responsive interface.

2. Template / Starting Point

The website was developed from scratch with assistance from ChatGPT for planning, generating and refining the UI structure and code. No external website template was directly copied.

3. AI Tools Used

AI Tool: ChatGPT

ChatGPT was used for website structure, HTML code generation, CSS styling, JavaScript functionality, responsive design improvements, debugging and documentation preparation.

4. Exact Prompts Used

- 1 Create a responsive personal portfolio website using HTML, CSS and JavaScript with sections for Home, About, Projects and Contact.
- 2 Make the portfolio professional, modern, responsive and suitable for a college frontend assignment.
- 3 Add a mobile navigation menu using JavaScript and make the website responsive on desktop, tablet and mobile.
- 4 Create a professional portfolio design using soft neutral colours, clean typography, cards, buttons and responsive layouts.
- 5 Help me create documentation for a personal portfolio website assignment including AI tools, prompts, development method and GitHub Pages hosting.

5. Method / Development Approach

- 1 Planned the structure of the portfolio website.
- 2 Created the HTML structure containing navigation, hero, About, Projects, Contact and Footer sections.

- 3 Added CSS styling for layout, typography, colours, buttons, cards, spacing and visual effects.
- 4 Added responsive CSS media queries for tablet and mobile screen sizes.
- 5 Added JavaScript functionality for the mobile navigation menu and dynamic copyright year.
- 6 Added personal information, skills and project details.
- 7 Tested the website locally on a desktop browser.
- 8 Tested the responsive layout on smaller screen sizes.
- 9 Created the project documentation.
- 10 Uploaded the website files to a public GitHub repository.
- 11 Enabled GitHub Pages to host the website.
- 12 Tested the live website and documentation download button.

6. Technologies Used

HTML5, CSS3, JavaScript, GitHub and GitHub Pages.

7. Website Sections

- Header / Navigation
- Hero / Introduction
- About Me
- Skills
- Projects
- Contact
- Footer
- Download Documentation

8. Live Website

To be added after GitHub Pages deployment.

9. GitHub Repository

To be added after creating and uploading the public repository.

10. Conclusion

The project demonstrates the development of a responsive personal portfolio website using HTML, CSS and JavaScript, with emphasis on usability, responsive behaviour and professional visual presentation.
